DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C 121:
 - I. Claim 1, drawn to a method of wire bonding, classified in class 228, subclass 180.5.
 2. Claims 2 and 3, drawn to an apparatus of wire bonding, classified in class 228, subclass 4.5.
2. Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed can be used to practice another and materially different process. For example, the apparatus of invention II can be used for any terminal connection on a semiconductor device. Furthermore the method can be practiced on an apparatus that lacks a control program.
3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Art Unit: 1725

4. During a telephone conversation with Attorney Henry Koda on September 28, 2005 an election was made without traverse to prosecute invention I, claim 1. Claims 2 and 3 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

EXAMINER'S AMENDMENT

5. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Henry Koda on September 28, 2005 on.

The application has been amended as follows:

Cancel non-elected claims 2 and 3.

6. The following is an examiner's statement of reasons for allowance: the prior art fails to teach or suggest a method for wire bonding for connecting a first bonding point and a second bonding point by a wire loop; wherein, contact between the bonding object and the wire loop is preventable; the present application addresses the problem wherein causing the capillary to move toward an opposite side from said second bonding point, thus forming a second kink at a tip point of a standing portion of said wire in said second bonding position; and a loop forming process comprising the steps of

Art Unit: 1725

raising said capillary so as to pay out said wire until said first kink is positioned at a tip end of said capillary, while holding said wire in this state, moving said capillary to said second bonding point, and connecting said wire to said second bonding point at said first kink of said wire, thus forming a wire loop. As a result of these inventive steps the shape of the wire loop is stably formed with a low loop height, and a more compact and thinner package is possible.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Nishiura et al. (US 5989995), Nishiura et al. (US 6343733), Tsai et al. (US 6176416), Nishiura et al. (US 6213384) Chao et al. (US 6391759), Nishiura et al. (US 5967401) and Arakwa (US 2000/0137327) are cited in PTO-892.
